Data Checks

Table 1: Row counts by question type

Question	N
dmy1	355
dmy2	355
meat	355
oil	355

Table 2: Row counts by source type

Source	N
	710
expert	355
influencer	355

Duplicate respondent-question rows: 0

Table 3: Outcome Variable Summary Statistics

Statistic	N	Mean	St. Dev.	Min	Max
Accurate	1,420	5.120	1.583	1	7
Authentic	1,420	5.088	1.589	1	7
Believable	1,420	5.190	1.624	1	7
Credibility Index	710	4.933	1.545	1.000	7.000

Diagnostic 1: Randomization Balance

Tests whether treatment assignment (`condition_sequence`) predicts credibility — it should not in a well-randomized experiment.

Table 4: Randomization Balance (Condition Sequence)

	<i>Dependent variable:</i>	
	Meat Credibility	Oil Credibility
	(1)	(2)
Influencer Meat / Expert Oil	−0.270** (0.120)	0.365*** (0.099)
Constant	4.638*** (0.079)	4.746*** (0.064)
Robust SE	Yes	Yes
Observations	768	768
R ²	0.007	0.018
Adjusted R ²	0.005	0.017
<i>Note:</i>	*p<0.1; **p<0.05; ***p<0.01	

Diagnostic 2: Order / Position Effects

Tests whether question presentation order (`order_pattern`: `ftft` vs `tfft`) predicts credibility — it should not.

Table 5: Order / Position Effects

	<i>Dependent variable:</i>	
	Meat Credibility	Oil Credibility
	(1)	(2)
Order Pattern: tfft (vs ftft)	−0.107 (0.120)	0.125 (0.098)
Constant	4.568*** (0.085)	4.850*** (0.068)
Robust SE	Yes	Yes
Observations	768	768
R ²	0.001	0.002
Adjusted R ²	−0.0003	0.001
<i>Note:</i>	*p<0.1; **p<0.05; ***p<0.01	

Diagnostic 3: Attention Check Effects

Tests whether failing attention checks (SC0) is associated with different credibility scores. Run on all completers (`d_complete`) to preserve variation in SC0.

Table 6: Attention Check Effects

	<i>Dependent variable:</i>	
	Meat Credibility (1)	Oil Credibility (2)
Failed Attention Checks (SC0)	0.180*** (0.045)	0.046 (0.042)
Constant	4.674*** (0.056)	5.010*** (0.047)
Robust SE	Yes	Yes
Observations	1,420	1,420
R ²	0.013	0.001
Adjusted R ²	0.012	0.0004
<i>Note:</i>	*p<0.1; **p<0.05; ***p<0.01	

Diagnostic 4: Survey Duration Effects

Tests whether time spent on the survey predicts credibility — a proxy for satisficing or rushing behavior.

Table 7: Survey Duration Effects

	<i>Dependent variable:</i>	
	Meat Credibility	Oil Credibility
	(1)	(2)
Duration (seconds)	0.00000 (0.00002)	−0.00004** (0.00002)
Constant	4.513*** (0.063)	4.934*** (0.052)
Robust SE	Yes	Yes
Observations	768	768
R ²	0.00001	0.001
Adjusted R ²	−0.001	−0.0001
<i>Note:</i>	*p<0.1; **p<0.05; ***p<0.01
